Geophysical Contractors Needed

Legacy Iron is looking for Geophysical contractors / agencies to assist in geophysical surveys and data interpretation for its tenements located in WA. The planned works are as below.

1. Downhole EM survey for Ni and base metals in 7 to 10 drill holes (total 700 to 800 m) at tenement approximately located 100 KM NW of Menzies. The consultancy services required for this project are:
 - a. Assisting in finalising Downhole EM survey plan.
 - b. Planning and monitoring the survey work to ensure quality control on data acquisition.
 - c. Data interpretation and final report preparation.

2. Reinterpretation of HeliTEM data (365-line KM and 200m flight line spacing) for target generation of base metal deposit for our tenement which is located near Halls Creek, Kimberley. The consultancy services required are
 - a. Re-interpretation of the available HeliTEM data and modelling of EM anomalies by using HeliTEM and any other data set which is available and felt necessary.
 - b. Preparation and submission of final report.

3. Interpretation of all available open geophysical data for delineations of mineralisation controls for gold (structures and quartz veins etc) for our project located 200Km NE of Kalgoorlie. The consultancy services required in this regard are:
 - a. Collection and compilation of open geophysical data for approx. 20 sq. km. area.
 - b. Interpretation and target generation.
 - c. Suggesting and planning appropriate ground geophysical survey to develop new targets, if advisable.
 - d.

If the above work is of interest to you, please submit the schedule of rates along with capability statement. It would be great if you could submit a quotation as soon as practicable with next 2 weeks.

All enquiries can be sent to info@legacyiron.com.au
